

STATEMENTS

CL (I) CLR Clear variables in memory
 DATA c1[,c2,...,cn] Define constant DATA for READ
 DEF FN name(variable) = expression Defines user function
 DIM var(s1...sn) [,var(s1,...,sn)...] Demension arrays
 E/ (N) END End of program execution
 FOR var=start TO limit [STEP increment] Loop from FOR to NEXT
 NEXT [var] [,var]... Terminates FOR loops
 GET var1 [,var2...,var10] Read keyboard keys into variables
 GO^W (S) GOSUB line# Go to subroutine at line# and return to next statement
 GOTO line# Go to line#
 IF exp THEN line# If exp is true, then go to line#
 IF exp THEN statements If exp is true, then execute statements on line

T I (H)
 THEN

ST- (E)
 STEP

BASIC

LISTING PROGRAM ON PRINTER

OPEN 4,4:CMD4:LIST:PRINT#4 CLOSE4

© COPYRIGHT 1983

CHEATSHEET PRODUCTS™
 P.O. Box 8299, Pgh, Pa. 15218
 (412) 456-7420

CL (I) CLOSE [file#] Close file
 C\ (M) CMD file#[,string] Re-direct display output to file#
 GET# file#, var1, [var2 ... ,varn] Read character from file #
 I/ (N) INPUT# file#,variable list Read data from file# to variable list

STATEMENTS (I/O)

OPEN (P) OPEN file#[,device#][,addr#][,"filename[, REL or SEQ][, R or W]"]
 Open file for device
 PRINT# (R) PRINT# file#[,var1] [,var2 or ;var2] [:] Write variables to file
 READ (E) READ var1[,var2 ... ,varn] Read DATA statements into variables

INPUT (I) INPUT ["prompt"] variable list Read keyboard data into variable list
 L- (L) [LET] variable = exp Assign exp to variable
 ON exp GOTO or GOSUB line#[,line#] Go to line# indexed by exp
 POKE adr,value Put 8-bit value into memory adr
 ? PRINT[var1] [,var2 or ;var2] [:] Write variables
 READ [var1],var2... ,varn] Read DATA statements into variables
 REM [text] Remark statement
 RESTORE Reset DATA statement pointer to beginning
 REI (T) RETURN Exit subroutine to statement following GOSUB
 S1 (T) STOP Stops program execution
 S I (Y) SYS addr Go to memory address addr and execute machine program
 WAIT (A) WAIT addr,mask1[,mask2] Wait for address addr to match mask(s)

BASIC

A I (B) ABS(exp) — Absolute value of exp
 A^W (S) ASC(n) — Convert Commodore ASCII to value n
 AI (T) ATN(n) — Arctangent of n
 COS(n) — Cosine of n
 EXP(n) — e(2.7182...) raised to power n
 FRE(dmy) — Returns amount of free memory space
 INT(n) — Returns integer part
 LEN(str) — Returns length of string
 LOG(n) — Log base e of n
 P- (E) PEEK(addr) — Return value at addr
 POS (D) POS(dmy) — Returns cursor position
 RN (N) RND(n) — Random number (0.0 to 1.0)
 SIN(n) — Sine of n
 SQR(n) — Square root of n
 ST STATUS — Status of last I/O operation
 TAN TAN(n) — Tangent of n
 TI TIME — Elapsed time in 1/60 seconds
 USR(addr) — Jump to user subroutine
 VAL(str) — Converts numeric string to value

NUMERIC FUNCTIONS

COMMANDS

CONT (O) CONT Continue to RUN program after STOP or END.
 LIST (I) LIST [first line#] - [second line#] List program
 LOAD (D) LOAD ["filename"] [,device#] [,address] Load program
 NEW (NEW) NEW Delete current program and clear variables
 RUN (U) RUN [line#] Run program and clear variables
 SAVE (A) SAVE ["filename"] [,device#] [,address] Save program
 VERIFY ("filename") [,device#] Compare saved program

DEVICE NUMBER

- 0 Keyboard
- 1 Cassette tape
- 2 RS232
- 3 Screen
- 4 Printer #1
- 5 Printer #2
- 8 Disk #1 (15=CMD CHNL)
- 9 Disk #2 (16=CMD CHNL)
- 10 Disk #3 (17=CMD CHNL)
- 11 Disk #4 (18=CMD CHNL)

A/ (N) AND
 OR OR
 NOT (O) NOT

DISK COMMANDS

OPEN 15,8,15,"UI":CLOSE15 Sets 1541 disk to use VIC-20
 VERIFY"TEST",8 Compares program with memory
 OPEN15,8,15 Opens CMD channel for the following:
 PRINT#15,"N0:diskname, ID" Formats blank diskette (2 to 3 min)
 PRINT#15,"C0:newfile=0:oldfile" Copies file
 PRINT#15,"R0:newname=oldname" Renames file
 PRINT#15,"S0:filename" Erases file
 PRINT#15,"I" Initialize disk
 PRINT#15,"V" Validate diskette
 LOAD"\$",8 Loads disk directory into memory
 SAVE"@0:TEST",8 Saves and replaces program

STRING FUNCTIONS

- CHR\$(n) — Convert n to ASCII character
- LEFT\$(str,n) — Leftmost n characters
- MID\$(str,s,n) — Substring starting at s for n char
- RIGHT\$(str,n) — Rightmost n characters
- SPC(n) — Print (or output) n spaces
- STR\$(n) — Convert n to string
- TAB(n) — Tab to nth position
- TIME\$ — Set and return time as hhmmss
